At Moxie, we are bringing IoT product concepts to life - giving ideas a pulse. Moxie works with startups and corporations to plan, design, and prototype app-connected electronics.

Project Manager – Rapid Prototyping Team

We are currently looking for a Project Manager for our rapid prototyping initiatives. This role is on a team that is able to take a client's IoT product concept, map a path to create devices and apps, and execute on that plan to deliver world class results.

Are you looking for a small, tightly integrated team where everyone brings a respected skillset to the discussion? We are looking for a talented manager who is passionate about building IoT products and is willing to be responsible for translating client requests into engineering plans and schedules. As Project Manager you will report directly to Moxie CEO, Dr. Austin Gurley, work with the Moxie Sales Team to define the scope of each project, and lead an engineering team to bring it to fruition. This position places you within a team of domain experts where you can learn a lifetime of skills from your teammates and solve problems that move the world forward. If you are motivated by continual self-improvement and projects 'done right', please apply.

What You Will Gain

Knowledge and skills from managing a team at the forefront of IoT development. The pride of creation from contributing your ideas and work to IoT systems that impact thousands of people around the world.

Your Responsibilities

You will manage a team of passionate engineers who each have a role in synthesizing IoT products. Your contributions to this team will include
- Meeting with potential clients (alongside the Sales team) to evaluate project fit
- Leading the process of mapping a project to engineering requirements
- Creating detailed schedules and timelines for the engineering team
- Managing engineers to meet deadlines and deliver world class IoT systems
- Managing client communications throughout the design, build, and delivery process

Requirements
- Detail-oriented
- Willing to take responsibility for completing projects
- Ability to plan and solve engineering problems
- Comfortable communicating with clients, managing expectations and timelines
- Bachelors in business management or an engineering field
- 2+ years project management experience

Nice to Have
- 2+ years engineering experience
- Application development project management training
- Programming experience (C++ preferred)
